Re: LEED Information

Service Wire Co. is committed to utilizing recycled material in our products. We constantly seek new technologies and new opportunities to enhance the environmental compatibility of our products while providing superior performance to our end-users.

This memo documents the aspects of our products and operations that comply with the environmental guidelines as specified in LEED:

- #1: Approximately 20+% of all raw materials used (copper rod, plastic-based compounds, etc.) originate from recycled materials. As such, our products meet MR 4.1/4.2 Recycled Content requirements of LEED.
- #2: Approximately 20% of all wood reels used to store and ship material are post-consumer recycled products.
- #3: All production scrap is collected and re-used either in-house or via 3rd party recyclers (less than 10% of scrap material goes to landfills).
- #4: Products manufactured within 500 miles of Culloden, WV, Houston, TX, or Phoenix, AZ meet MR 5.1/5.2 of the LEED.
- #5: All products manufactured by Service Wire Co. meet the LEED requirement of <300 ppm Lead.

Service Wire Co. also offers a number of cable designs specifically tailored to environmental concerns:

- Our **EnviroPlus**[®] line of products are Limited Smoke, Low Corrosive, Zero-Halogen, and Lead Free.
- **ALL PVC products** offered by our company are RoHS compliant non-lead-stabilized PVC products for environmentally sensitive locations or jobs.

As a company, we take an active role on NEMA's environmental boards and on NEMA's representative board for the LEED / Green Building Code.

If you should have any questions regarding this information, please feel free to contact me.

Sincerely,

Lee Perry
